## wheels big in Munich

*snow-show the go-show for bikes*

**They've done it again! For the second year on the trot Ispo has become a launch pad for tyred types.** This time the monks have it - with the Bergmönch a BrandNew winner that gives people the thrill-a-minute dash where you don't want the brakes to fail when your nerve goes.

Munich is the European Show Capital of Snowsports, and it's a reflection on the pulling power of the pedal that sees Ispo aisles putting a focus on things that don't just slide on the white stuff. Ski resorts are known for their cycling stage race finishes and the retailers in those sporting centres know that summer fun-seekers will turn up looking for things that can go bump down the slopes. Be sure the Bergmönch will sell itself!

for the ride go to: [www.ispo-brandnew.com/en/Winner\\_Finalist.Winner.Winner\\_Product.aspx?productid=625](http://www.ispo-brandnew.com/en/Winner_Finalist.Winner.Winner_Product.aspx?productid=625)

The Bergmönch is fun, a useful combination of backpack and downhill machine that is ready for any adventure. An innovative folding mechanism keeps the thrilling invention small and handy, and the 9.5kg Bergmönch rests comfortably on the back.

slope off in this . .

**Named for the season,** the Wintry Jacket is a windproof softshell garment that is well-suited for all types of winter sports. A new introduction from Vaude the comfortably soft, high stretch fabric and the casual All Mountain styling will put it right at the top of cycling clobber.

Even the colours are right - bold and bright for cool, grey days. Specific Womens' fit and also with a Mens version with zip-off sleeves.

## adding to their blinking good idea

*more in the "see-me" vein from the Pedalites people*

**As the green features of solar powered lighting products imprint with consumers,** Pedalite is pushing the idea for more peace of mind for people who go outdoors after dark. Joining the already popular Pedalite comes the Baglite and Anklelite products, all distributed by Raleigh.

Pedalites don't rely on battery power - the moment you start pedalling the Pedalites uniquely harvest and store a small amount of energy so the lights continue to flash for up to five minutes when the cyclist is freewheeling or has stopped at a road junction. The makers reckon Pedalites can be seen from up to 1km away.

Now there are additions to the range and retailing for around £25, the Baglite is a solar-powered lighting system that is worn over the shoulder, fitting over any size daysack or bag. Ideal not only for cyclists but all others who wish to remain visible after dark. The Baglite has a single red floodlight at the back and two white floodlights at the front attached to straps that fit to the harness of a pack. The light shines at 360 degrees, has a claim for being seen clearly by motorists any time of day or night from a distance of 1km.

The lights can be set to different modes - flashing or constant. Users can get one hour of light out of a Baglite for each hour of good sunlight to which it is exposed. Anklelites do much the same job in warning approaching traffic of the location of people such as cyclists, walkers and horse riders who are on paths and roads.

Retailing at £12.49, Anklelite is solar powered, weather resistant and lightweight. With a 360 floodlight module it fits all sizes and can be worn over boots or on leggings.

**"seen clearly by motorists any time of day or night"**
