Battery-Free Bicycle Lighting

This new concept of battery-free Pedalites will provide 360 degree lighting to ensure that cyclists can be seen from the side. They are based on patented technology and are powered only using cycling energy. The lights stay on for up to five minutes after the pedalling has stopped meaning that cyclists can also be seen clearly at road junctions. The lights also create a virtual cycle lane so bikes with Pedalites fitted seem wider to cars and they tend to give them more space and distance.
